

trendhuntr

Sentiment based Twitter data analysis lets you analyse trends and stay ahead of the curve.

Are you trying to make sense of all the social media buzz? Do you want to be able to attach numbers to all the channels you're participating in?

Instead of micro-managing Facebook and Pinterest, we are offering you the big picture! We can provide you with a tool that will make sense of all the chatter and thousands of messages that are hashtagged and sent to you directly.

trendhuntr is the one-stop solution to consolidate and correlate all the information. In this first version we already offer:

- Tweets with sentiment analysis
 - giving you all the relevant information about what's been talked about, not just how many.
- Weighted Data
 - for a more precise mix of information, so you can apply your energy to where it really counts
- Modular & Extendable
 - new channels are easily added and included in the analysis, so you don't get to keep your valuable connections
- Aggregated Views
 - to show you the most important information on the first glance
- Easy to use
 - because what good is the best tool if you can't use it's full potential or don't like using it?

We can show you our dashboard that's already customized and fed with information about Bitcoin, the most controversial technology of the last years. It shows you its evolution in different and certainly surprising ways! Everyone was aware of the exchange rate, but we can show you what the world was really feeling.

Do you know what the world thinks about your business?

... Are you ready?
